name: Bug report
about: Create a report to help us improve
title: "[BUG] "
labels: bug
assignees: ''
---
Please provide as much details as possible, this will help us to deliver a
fix as soon as possible.
Thank you!
**Describe the bug**
A clear and concise description of what the bug is.
**Log and Stack trace**
Please provide a log and a stack trace (with exception), if applicable.
**To Reproduce**
Please provide a relevant code snippets to reproduce this bug.
**Expected behavior**
A clear and concise description of what you expected to happen.
**Please complete the following information:**
- LangChain4j version: e.g. 0.23.0
- Java version: e.g. 11
- Spring Boot version (if applicable): e.g. 2.7.14
**Additional context**
Add any other context about the problem here.
```

.github\ISSUE_TEMPLATE\feature_request.md

```
---
name: Feature request
about: Suggest an idea for this project
title: "[FEATURE] "
labels: enhancement
assignees: ''
---
**Is your feature request related to a problem? Please describe.**
A clear and concise description of what the problem is. Ex. I'm always
frustrated when [...]
**Describe the solution you'd like**
A clear and concise description of what you want to happen.
**Describe alternatives you've considered**
A clear and concise description of any alternative solutions or features
you've considered.
**Additional context**
Add any other context or screenshots about the feature request here.

/**
 * A {@link TextClassifier} that uses an {@link EmbeddingModel} and predefined examples to perform classification.
 * Classification is done by comparing the embedding of the text being classified with the embeddings of predefined examples.
 * The classification quality improves with a greater number of examples for each label.
 * Examples can be easily generated by the LLM.
 * <p>
 * Example:
 * <pre>{@code
 * enum Sentiment {
 *     POSITIVE, NEUTRAL, NEGATIVE
 * }
 *
 *  Map<Sentiment, List<String>> examples = Map.of(
 *     POSITIVE, List.of("This is great!", "Wow, awesome!"),
 *     NEUTRAL,  List.of("Well, it's fine", "It's ok"),
 *     NEGATIVE, List.of("It is pretty bad", "Worst experience ever!")
 * );
 *

the examples and the text to be classified.
     * @param examplesByLabel     A map containing examples of texts for each
label.
     *                            The more examples, the better. Examples can
be easily generated by the LLM.
     * @param maxResults          The maximum number of labels to return for
each classification.
     * @param minScore            The minimum similarity score required for
classification, in the range [0..1].
     *                            Labels scoring lower than this value will
be discarded.
     * @param meanToMaxScoreRatio A ratio, in the range [0..1], between the
mean and max scores used for calculating
     *                            the final score.
     *                            During classification, the embeddings of
examples for each label are compared to
     *                            the embedding of the text being classified.
     *                            This results in two metrics: the mean and
max scores.
     *                            The mean score is the average similarity
score for all examples associated with a given label.
     *                            The max score is the highest similarity
score, corresponding to the example most
     *                            similar to the text being classified.
     *                            A value of 0 means that only the mean score
will be used for ranking labels.
     *                            A value of 0.5 means that both scores will
contribute equally to the final score.
     *                            A value of 1 means that only the max score
will be used for ranking labels.
     */

/**
 * AI Services provide a simpler and more flexible alternative to chains.
 * You can define your own API (a Java interface with one or more methods),
 * and AiServices will provide an implementation for it (we call this "AI
Service").
 * <p>
 * Currently, AI Services support:
 * <pre>
 * - Prompt templates for user and system messages using {@link UserMessage}
and {@link SystemMessage}
 * - Structured prompts as method arguments (see {@link StructuredPrompt})
 * - Shared or per-user (see {@link MemoryId}) chat memory
 * - Retrievers
 * - Tools (see {@link Tool})
 * - Various return types (output parsers), see below
 * - Streaming (use {@link TokenStream} as a return type)
 * - Auto-moderation using {@link Moderate}
 * </pre>
 * <p>
```

```
 * Here is the simplest example of an AI Service:
 *
 * <pre>
 * interface Assistant {
 *
 *     String chat(String userMessage);
 * }
 *
 * Assistant assistant = AiServices.create(Assistant.class, model);
 *
 * String answer = assistant.chat("hello");
 * System.out.println(answer); // Hello, how can I help you today?
 * </pre>
 *
 * <pre>
 * The return type of methods in your AI Service can be any of the following:
 * - a {@code String} or an {@link AiMessage}, if you want to get the answer
from the LLM as-is
 * - a {@code List<String>} or {@code Set<String>}, if you want to receive
the answer as a collection of items or bullet points
 * - any {@code Enum} or a {@code boolean}, if you want to use the LLM for
classification
 * - a primitive or boxed Java type: {@code int}, {@code Double}, etc., if
you want to use the LLM for data extraction
 * - many default Java types: {@code Date}, {@code LocalDateTime}, {@code
BigDecimal}, etc., if you want to use the LLM for data extraction
 * - any custom POJO, if you want to use the LLM for data extraction
 * </pre>
 * <p>
 * Let's see how we can classify the sentiment of a text:
 * <pre>
 * enum Sentiment {
 *     POSITIVE, NEUTRAL, NEGATIVE
 * }
 *
 * interface SentimentAnalyzer {
 *
 *     {@code @UserMessage}("Analyze sentiment of {{it}}")
 *     Sentiment analyzeSentimentOf(String text);
 * }
 *
 * SentimentAnalyzer assistant = AiServices.create(SentimentAnalyzer.class,
model);
 *
 * Sentiment sentiment = analyzeSentimentOf.chat("I love you");
 * System.out.println(sentiment); // POSITIVE
 * </pre>
 * <p>
 * As demonstrated, you can put {@link UserMessage} and {@link SystemMessage}
annotations above a method to define
 * templates for user and system messages, respectively.
 * In this example, the special {@code {{it}}} prompt template variable is
used because there's only one method parameter.
 * However, you can use more parameters as demonstrated in the following
example:
 * <pre>
 * interface Translator {
 *
 *     {@code @SystemMessage}("You are a professional translator into
{{language}}")
 *     {@code @UserMessage}("Translate the following text: {{text}}")
```

```
 *     String translate(@V("text") String text, @V("language") String
language);
 * }
 * </pre>
 * <p>
 * See more examples <a href="https://github.com/langchain4j/langchain4j-
examples/tree/main/other-examples/src/main/java">here</a>.

/**
 * Represents an OpenAI language model, hosted on Azure, that has a chat
completion interface, such as gpt-3.5-turbo.
 * <p>
 * Mandatory parameters for initialization are: baseUrl, apiVersion and
apiKey.
 * <p>
 * There are two primary authentication methods to access Azure OpenAI:
 * <p>
 * 1. API Key Authentication: For this type of authentication, HTTP requests
must include the
 * API Key in the "api-key" HTTP header.
 * <p>
 * 2. Azure Active Directory Authentication: For this type of authentication,
HTTP requests must include the
 * authentication/access token in the "Authorization" HTTP header.
 * <p>
 * <a href="https://learn.microsoft.com/en-us/azure/ai-services/openai/
reference">More information</a>
 * <p>
 * Please note, that currently, only API Key authentication is supported by
this class,
 * second authentication option will be supported later.

/**
 * Represents an OpenAI language model, hosted on Azure, such as text-davinci-003.
 * The LLM's response is streamed token by token and should be handled with {@link StreamingResponseHandler}.
 * However, it's recommended to use {@link OpenAiStreamingChatModel} instead,
 * as it offers more advanced features like function calling, multi-turn conversations, etc.
 * <p>
 * Mandatory parameters for initialization are: baseUrl, apiVersion and apiKey.
 * <p>
 * There are two primary authentication methods to access Azure OpenAI:
 * <p>
 * 1. API Key Authentication: For this type of authentication, HTTP requests must include the
 * API Key in the "api-key" HTTP header.
 * <p>
 * 2. Azure Active Directory Authentication: For this type of authentication, HTTP requests must include the
 * authentication/access token in the "Authorization" HTTP header.
 * <p>
 * <a href="https://learn.microsoft.com/en-us/azure/ai-services/openai/reference">More information</a>
 * <p>
 * Please note, that currently, only API Key authentication is supported by this class,
 * second authentication option will be supported later.

langchain4j-cassandra\src\test\resources\story-about-happy-carrot.txt

Once upon a time in the town of VeggieVille, there lived a cheerful carrot named Charlie.
Charlie was a radiant carrot, always beaming with joy and positivity.
His vibrant orange skin and lush green top were a sight to behold, but it was his infectious laughter and warm personality that really set him apart.
Charlie had a diverse group of friends, each a vegetable with their own unique characteristics.
There was Bella the blushing beetroot, always ready with a riddle or two; Timmy the timid tomato, a gentle soul with a heart of gold; and Percy the prankster potato, whose jokes always brought a smile to everyone's faces.
Despite their differences, they shared a close bond, their friendship as robust as their natural goodness.
Their lives were filled with delightful adventures, from playing hide-and-seek amidst the leafy lettuce to swimming in the dewy droplets that pooled on the cabbage leaves.
Their favorite place, though, was the sunlit corner of the vegetable patch, where they would bask in the warmth of the sun, share stories, and have hearty laughs.
One day, a bunch of pesky caterpillars invaded VeggieVille.
The vegetables were terrified, fearing they would be nibbled to nothingness.
But Charlie, with his usual sunny disposition, had an idea.
He proposed they host a grand feast for the caterpillars, with the juiciest leaves from the outskirts of the town.
Charlie's optimism was contagious, and his friends eagerly joined in to prepare the feast.
When the caterpillars arrived, they were pleasantly surprised.
They enjoyed the feast and were so impressed with the vegetables' hospitality that they promised not to trouble VeggieVille again.
In return, they agreed to help pollinate the flowers, contributing to a more lush and vibrant VeggieVille.
Charlie's idea had saved the day, but he humbly attributed the success to their teamwork and friendship.
They celebrated their victory with a grand party, filled with laughter, dance, and merry games.
That night, under the twinkling stars, they made a pact to always stand by each other, come what may.
From then on, the story of the happy carrot and his friends spread far and wide, a tale of friendship, unity, and positivity.
Charlie, Bella, Timmy, and Percy continued to live their joyful lives, their laughter echoing through VeggieVille.
And so, the tale of the happy carrot and his friends serves as a reminder that no matter the challenge, with optimism, teamwork, and a bit of creativity, anything is possible.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

README.md

LangChain for Java: Supercharge your Java application with the power of LLMs
[](https://twitter.com/intent/follow?screen_name=langchain4j)
[](https://discord.gg/V5qHrWNVf)
Project goals
The goal of this project is to simplify the integration of AI/LLM capabilities into your Java application.
This can be achieved thanks to:
- **A simple and coherent layer of abstractions**, designed to ensure that your code does not depend on concrete implementations such as LLM providers, embedding store providers, etc. This allows for easy swapping of components.
- **Numerous implementations of the above-mentioned abstractions**, providing you with a variety of LLMs and embedding stores to choose from.
- **Range of in-demand features on top of LLMs, such as:**
    - The capability to **ingest your own data** (documentation, codebase, etc.), allowing the LLM to act and respond based on your data.
    - **Autonomous agents** for delegating tasks (defined on the fly) to the LLM, which will strive to complete them.
    - **Prompt templates** to help you achieve the highest possible quality of LLM responses.
    - **Memory** to provide context to the LLM for your current and past conversations.
    - **Structured outputs** for receiving responses from the LLM with a desired structure as Java POJOs.
    - **"AI Services"** for declaratively defining complex AI behavior behind a simple API.
    - **Chains** to reduce the need for extensive boilerplate code in common use-cases.
    - **Auto-moderation** to ensure that all inputs and outputs to/from the LLM are not harmful.
Code examples
Please see examples of how LangChain4j can be used in `langchain4j-examples` repo:
- [Examples in plain Java](https://github.com/langchain4j/langchain4j-examples/tree/main/other-examples/src/main/java)
- [Example with Spring Boot](https://github.com/langchain4j/langchain4j-examples/blob/main/spring-boot-example/src/test/java/dev/example/CustomerSupportApplicationTest.java)
News
29 September:
- Updates to models API: return `Response<T>` instead of `T`. `Response<T>` contains token usage and finish reason.
- All model and embedding store integrations now live in their own modules
- Integration with [Vespa](https://vespa.ai/) by [@Heezer](https://github.com/Heezer)
- Integration with [Elasticsearch](https://www.elastic.co/) by [@Martin7-1](https://github.com/Martin7-1)
- Integration with [Redis](https://redis.io/) by [@Martin7-1](https://github.com/Martin7-1)
- Integration with [Milvus](https://milvus.io/) by [@IuriiKoval](https://github.com/IuriiKoval)
- Integration with [Astra DB](https://www.datastax.com/products/datastax-astra) and [Cassandra](https://cassandra.apache.org/) by [@clun](https://github.com/clun)
- Added support for overlap in document splitters
- Some bugfixes and smaller improvements
29 August:

- Offline [text classification with embeddings](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/embedding/classification/EmbeddingModelTextClassifierExample.java)
- Integration with [Google Vertex AI](https://cloud.google.com/vertex-ai) by [@kuraleta](https://github.com/kuraleta)
- Reworked [document splitters](https://github.com/langchain4j/langchain4j/blob/main/langchain4j/src/main/java/dev/langchain4j/data/document/splitter/DocumentSplitters.java)
- In-memory embedding store can now be easily persisted
- [And more](https://github.com/langchain4j/langchain4j/releases/tag/0.22.0)

19 August:
- Integration with [Azure OpenAI](https://learn.microsoft.com/en-us/azure/ai-services/openai/overview) by [@kuraleta](https://github.com/kuraleta)
- Integration with Qwen models (DashScope) by [@jiangsier-xyz](https://github.com/jiangsier-xyz)
- [Integration with Chroma](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/embedding/store/ChromaEmbeddingStoreExample.java) by [@kuraleta](https://github.com/kuraleta)
- [Support for persistent ChatMemory](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/ServiceWithPersistentMemoryForEachUserExample.java)

10 August:
- [Integration with Weaviate](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/embedding/store/WeaviateEmbeddingStoreExample.java) by [@Heezer](https://github.com/Heezer)
- [Support for DOC, XLS and PPT document types](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/DocumentLoaderExamples.java) by [@oognuyh](https://github.com/oognuyh)
- [Separate chat memory for each user](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/ServiceWithMemoryForEachUserExample.java)
- [Custom in-process embedding models](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/embedding/model/InProcessEmbeddingModelExamples.java)
- Added lots of Javadoc
- [And more](https://github.com/langchain4j/langchain4j/releases/tag/0.19.0)

26 July:
- We've added integration with [LocalAI](https://localai.io/). Now, you can use LLMs hosted locally!
- Added support for [response streaming in AI Services](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/ServiceWithStreamingExample.java).

21 July:
- Now, you can do [text embedding inside your JVM](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/embedding/model/InProcessEmbeddingModelExamples.java).

17 July:
- You can now try out OpenAI's `gpt-3.5-turbo` and `text-embedding-ada-002` models with LangChain4j for free, without needing an OpenAI account and keys! Simply use the API key "demo".

15 July:
- Added EmbeddingStoreIngestor
- Redesigned document loaders (see FileSystemDocumentLoader)
- Simplified ConversationalRetrievalChain
- Renamed DocumentSegment into TextSegment
- Added output parsers for numeric types
- Added @UserName for AI Services
- Fixed [23](https://github.com/langchain4j/langchain4j/issues/23) and [24](https://github.com/langchain4j/langchain4j/issues/24)

11 July:
- Added ["Dynamic Tools"](https://github.com/langchain4j/langchain4j-examples/

blob/main/other-examples/src/main/java/ServiceWithDynamicToolsExample.java):
  Now, the LLM can generate code for tasks that require precise calculations, such as math and string manipulation. This will be dynamically executed in a style akin to GPT-4's code interpreter!
  We use [Judge0, hosted by Rapid API](https://rapidapi.com/judge0-official/api/judge0-ce/pricing), for code execution. You can subscribe and receive 50 free executions per day.
5 July:
- Now you can [add your custom knowledge base to "AI Services"](https://github.com/langchain4j/langchain4j-examples/blob/main/spring-boot-example/src/test/java/dev/example/CustomerSupportApplicationTest.java).
  Relevant information will be automatically retrieved and injected into the prompt. This way, the LLM will have a
  context of your data and will answer based on it!
- The current date and time can now be automatically injected into the prompt using
  special `{{current_date}}`, `{{current_time}}` and `{{current_date_time}}` placeholders.
3 July:
- Added support for Spring Boot 3
2 July:
- [Added Spring Boot Starter](https://github.com/langchain4j/langchain4j-examples/blob/main/spring-boot-example/src/test/java/dev/example/CustomerSupportApplicationTest.java)
- Added support for HuggingFace models
1 July:
- [Added "Tools"](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/ServiceWithToolsExample.java) (support for OpenAI functions)
Highlights
You can declaratively define concise "AI Services" that are powered by LLMs:
```java
interface Assistant {
    String chat(String userMessage);
}
Assistant assistant = AiServices.create(Assistant.class, model);
String answer = assistant.chat("Hello");
System.out.println(answer);
// Hello! How can I assist you today?
```
You can use LLM as a classifier:
```java
enum Sentiment {
    POSITIVE, NEUTRAL, NEGATIVE
}
interface SentimentAnalyzer {
    @UserMessage("Analyze sentiment of {{it}}")
    Sentiment analyzeSentimentOf(String text);
    @UserMessage("Does {{it}} have a positive sentiment?")
    boolean isPositive(String text);
}
SentimentAnalyzer sentimentAnalyzer =
AiServices.create(SentimentAnalyzer.class, model);
Sentiment sentiment = sentimentAnalyzer.analyzeSentimentOf("It is good!");
// POSITIVE
boolean positive = sentimentAnalyzer.isPositive("It is bad!");
// false
```
You can easily extract structured information from unstructured data:
```java
class Person {
```

```
    private String firstName;
    private String lastName;
    private LocalDate birthDate;
    public String toString() {...}
}
interface PersonExtractor {
    @UserMessage("Extract information about a person from {{it}}")
    Person extractPersonFrom(String text);
}
PersonExtractor extractor = AiServices.create(PersonExtractor.class, model);
String text = "In 1968, amidst the fading echoes of Independence Day, "
    + "a child named John arrived under the calm evening sky. "
    + "This newborn, bearing the surname Doe, marked the start of a new
journey.";
Person person = extractor.extractPersonFrom(text);
// Person { firstName = "John", lastName = "Doe", birthDate = 1968-07-04 }
```
You can define more sophisticated prompt templates using mustache syntax:
```java
interface Translator {
    @SystemMessage("You are a professional translator into {{language}}")
    @UserMessage("Translate the following text: {{text}}")
    String translate(@V("text") String text, @V("language") String language);
}
Translator translator = AiServices.create(Translator.class, model);
String translation = translator.translate("Hello, how are you?", "Italian");
// Ciao, come stai?
```
You can provide tools that LLMs can use! Can be anything: retrieve
information from DB, call APIs, etc.
See example [here](https://github.com/langchain4j/langchain4j-examples/blob/
main/other-examples/src/main/java/ServiceWithToolsExample.java).
Compatibility
- Java: 8 or higher
- Spring Boot: 2 or 3
Getting started
1. Add LangChain4j OpenAI dependency to your project:
    - Maven:
      ```
      <dependency>
          <groupId>dev.langchain4j</groupId>
          <artifactId>langchain4j-open-ai</artifactId>
          <version>0.23.0</version>
      </dependency>
      ```
    - Gradle:
      ```
      implementation 'dev.langchain4j:langchain4j-open-ai:0.23.0'
      ```
2. Import your OpenAI API key:
    ```java
    String apiKey = System.getenv("OPENAI_API_KEY");
    ```
    You can use the API key "demo" to test OpenAI, which we provide for free.
    [How to gen an API key?](https://github.com/langchain4j/langchain4j#how-
to-get-an-api-key)
3. Create an instance of a model and start interacting:
    ```java
    OpenAiChatModel model = OpenAiChatModel.withApiKey(apiKey);
    String answer = model.generate("Hello world!");
    System.out.println(answer); // Hello! How can I assist you today?
```

```
## Disclaimer
Please note that the library is in active development and:
- Many features are still missing. We are working hard on implementing them
ASAP.
- API might change at any moment. At this point, we prioritize good design in
the future over backward compatibility
  now. We hope for your understanding.
- We need your input! Please [let us know](https://github.com/langchain4j/
langchain4j/issues/new/choose) what features you need and your concerns about
the current implementation.
## Current capabilities:
- AI Services:
    - [Simple](https://github.com/langchain4j/langchain4j-examples/blob/main/
other-examples/src/main/java/SimpleServiceExample.java)
    - [With Memory](https://github.com/langchain4j/langchain4j-examples/blob/
main/other-examples/src/main/java/ServiceWithMemoryExample.java)
    - [With Tools](https://github.com/langchain4j/langchain4j-examples/blob/
main/other-examples/src/main/java/ServiceWithToolsExample.java)
    - [With Streaming](https://github.com/langchain4j/langchain4j-examples/
blob/main/other-examples/src/main/java/ServiceWithStreamingExample.java)
    - [With Retriever](https://github.com/langchain4j/langchain4j-examples/
blob/main/other-examples/src/main/java/ServiceWithRetrieverExample.java)
    - [With Auto-Moderation](https://github.com/langchain4j/langchain4j-
examples/blob/main/other-examples/src/main/java/
ServiceWithAutoModerationExample.java)
    - [With Structured Outputs, Structured Prompts, etc](https://github.com/
langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/
OtherServiceExamples.java)
- Integration with [OpenAI](https://platform.openai.com/docs/introduction)
and [Azure OpenAI](https://learn.microsoft.com/en-us/azure/ai-services/openai/
overview) for:
    - [Chats](https://platform.openai.com/docs/guides/chat) (sync + streaming
+ functions)
    - [Completions](https://platform.openai.com/docs/guides/completion) (sync
+ streaming)
    - [Embeddings](https://platform.openai.com/docs/guides/embeddings)
- Integration with [Google Vertex AI](https://cloud.google.com/vertex-ai) for:
    - [Chats](https://cloud.google.com/vertex-ai/docs/generative-ai/chat/chat-
prompts)
    - [Completions](https://cloud.google.com/vertex-ai/docs/generative-ai/
text/text-overview)
    - [Embeddings](https://cloud.google.com/vertex-ai/docs/generative-ai/
embeddings/get-text-embeddings)
- Integration with [HuggingFace Inference API](https://huggingface.co/docs/
api-inference/index) for:
    - [Chats](https://huggingface.co/docs/api-inference/
detailed_parameters#text-generation-task)
    - [Completions](https://huggingface.co/docs/api-inference/
detailed_parameters#text-generation-task)
    - [Embeddings](https://huggingface.co/docs/api-inference/
detailed_parameters#feature-extraction-task)
- Integration with [LocalAI](https://localai.io/) for:
  - Chats (sync + streaming + functions)
  - Completions (sync + streaming)
  - Embeddings
- Integration with [DashScope](https://dashscope.aliyun.com/) for:
    - Chats (sync + streaming)
    - Completions (sync + streaming)
    - Embeddings
- [Chat memory](https://github.com/langchain4j/langchain4j-examples/blob/main/
```

other-examples/src/main/java/ChatMemoryExamples.java)
- [Persistent chat memory](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/ServiceWithPersistentMemoryForEachUserExample.java)
- [Chat with Documents](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/ChatWithDocumentsExamples.java)
- Integration with [Astra DB](https://www.datastax.com/products/datastax-astra) and [Cassandra](https://cassandra.apache.org/)
- [Integration](https://github.com/langchain4j/langchain4j-examples/blob/main/chroma-example/src/main/java/ChromaEmbeddingStoreExample.java) with [Chroma](https://www.trychroma.com/)
- [Integration](https://github.com/langchain4j/langchain4j-examples/blob/main/elasticsearch-example/src/main/java/ElasticsearchEmbeddingStoreExample.java) with [Elasticsearch](https://www.elastic.co/)
- [Integration](https://github.com/langchain4j/langchain4j-examples/blob/main/milvus-example/src/main/java/MilvusEmbeddingStoreExample.java) with [Milvus](https://milvus.io/)
- [Integration](https://github.com/langchain4j/langchain4j-examples/blob/main/pinecone-example/src/main/java/PineconeEmbeddingStoreExample.java) with [Pinecone](https://www.pinecone.io/)
- [Integration](https://github.com/langchain4j/langchain4j-examples/blob/main/redis-example/src/main/java/RedisEmbeddingStoreExample.java) with [Redis](https://redis.io/)
- [Integration](https://github.com/langchain4j/langchain4j-examples/blob/main/vespa-example/src/main/java/VespaEmbeddingStoreExample.java) with [Vespa](https://vespa.ai/)
- [Integration](https://github.com/langchain4j/langchain4j-examples/blob/main/weaviate-example/src/main/java/WeaviateEmbeddingStoreExample.java) with [Weaviate](https://weaviate.io/)
- [In-memory embedding store](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/embedding/store/InMemoryEmbeddingStoreExample.java) (can be persisted)
- [Structured outputs](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/OtherServiceExamples.java)
- [Prompt templates](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/PromptTemplateExamples.java)
- [Structured prompt templates](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/StructuredPromptTemplateExamples.java)
- [Streaming of LLM responses](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/StreamingExamples.java)
- [Loading txt, html, pdf, doc, xls and ppt documents from the file system and via URL](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/DocumentLoaderExamples.java)
- [Splitting documents into segments](https://github.com/langchain4j/langchain4j-examples/blob/main/other-examples/src/main/java/ChatWithDocumentsExamples.java):
    - by paragraphs, lines, sentences, words, etc
    - recursively
    - with overlap
- Token count estimation (so that you can predict how much you will pay)

Coming soon:
- Extending "AI Service" features
- Integration with more LLM providers (commercial and free)
- Integrations with more embedding stores (commercial and free)
- Support for more document types
- Long-term memory for chatbots and agents
- Chain-of-Thought and Tree-of-Thought

Request features
Please [let us know](https://github.com/langchain4j/langchain4j/issues/new/choose) what features you need!

Contribute
Please help us make this open-source library better by contributing.
Some guidelines:
1. Follow [Google's Best Practices for Java Libraries](https://jlbp.dev/).
2. Keep the code compatible with Java 8.
3. Avoid adding new dependencies as much as possible. If absolutely necessary, try to (re)use the same libraries which are already present.
4. Follow existing code styles present in the project.
5. Ensure to add Javadoc where necessary.
6. Provide unit and/or integration tests for your code.
7. Large features should be discussed with maintainers before implementation.
Use cases
You might ask why would I need all of this?
Here are a couple of examples:
- You want to implement a custom AI-powered chatbot that has access to your data and behaves the way you want it:
    - Customer support chatbot that can:
        - politely answer customer questions
        - take /change/cancel orders
    - Educational assistant that can:
        - Teach various subjects
        - Explain unclear parts
        - Assess user's understanding/knowledge
- You want to process a lot of unstructured data (files, web pages, etc) and extract structured information from them.
  For example:
    - extract insights from customer reviews and support chat history
    - extract interesting information from the websites of your competitors
    - extract insights from CVs of job applicants
- You want to generate information, for example:
    - Emails tailored for each of your customers
    - Content for your app/website:
        - Blog posts
        - Stories
- You want to transform information, for example:
    - Summarize
    - Proofread and rewrite
    - Translate
Best practices
We highly recommend watching [this amazing 90-minute tutorial](https://www.deeplearning.ai/short-courses/chatgpt-prompt-engineering-for-developers/) on prompt engineering best practices, presented by Andrew Ng (DeepLearning.AI) and Isa Fulford (OpenAI).
This course will teach you how to use LLMs efficiently and achieve the best possible results. Good investment of your time!
Here are some best practices for using LLMs:
- Be responsible. Use AI for Good.
- Be specific. The more specific your query, the best results you will get.
- Add a ["Let’s think step by step" instruction](https://arxiv.org/pdf/2205.11916.pdf) to your prompt.
- Specify steps to achieve the desired goal yourself. This will make the LLM do what you want it to do.
- Provide examples. Sometimes it is best to show LLM a few examples of what you want instead of trying to explain it.
- Ask LLM to provide structured output (JSON, XML, etc). This way you can parse response more easily and distinguish
  different parts of it.
- Use unusual delimiters, such as \```triple backticks``` to help the LLM distinguish

  data or input from instructions.
How to get an API key
You will need an API key from OpenAI (paid) or HuggingFace (free) to use LLMs hosted by them.
We recommend using OpenAI LLMs (`gpt-3.5-turbo` and `gpt-4`) as they are by far the most capable and are reasonably priced.
It will cost approximately $0.01 to generate 10 pages (A4 format) of text with `gpt-3.5-turbo`. With `gpt-4`, the cost will be $0.30 to generate the same amount of text. However, for some use cases, this higher cost may be justified.
[How to get OpenAI API key](https://www.howtogeek.com/885918/how-to-get-an-openai-api-key/).
For embeddings, we recommend using one of the models from the [HuggingFace MTEB leaderboard](https://huggingface.co/spaces/mteb/leaderboard).
You'll have to find the best one for your specific use case.
Here's how to get a HuggingFace API key:
- Create an account on https://huggingface.co
- Go to https://huggingface.co/settings/tokens
- Generate a new access token

devoxx\src\main\resources\story-about-happy-carrot.txt

Once upon a time in the town of VeggieVille, there lived a cheerful carrot named Charlie.
Charlie was a radiant carrot, always beaming with joy and positivity.
His vibrant orange skin and lush green top were a sight to behold, but it was his infectious laughter and warm personality that really set him apart.
Charlie had a diverse group of friends, each a vegetable with their own unique characteristics.
There was Bella the blushing beetroot, always ready with a riddle or two; Timmy the timid tomato, a gentle soul with a heart of gold; and Percy the prankster potato, whose jokes always brought a smile to everyone's faces.
Despite their differences, they shared a close bond, their friendship as robust as their natural goodness.
Their lives were filled with delightful adventures, from playing hide-and-seek amidst the leafy lettuce to swimming in the dewy droplets that pooled on the cabbage leaves.
Their favorite place, though, was the sunlit corner of the vegetable patch, where they would bask in the warmth of the sun, share stories, and have hearty laughs.
One day, a bunch of pesky caterpillars invaded VeggieVille.
The vegetables were terrified, fearing they would be nibbled to nothingness.
But Charlie, with his usual sunny disposition, had an idea.
He proposed they host a grand feast for the caterpillars, with the juiciest leaves from the outskirts of the town.
Charlie's optimism was contagious, and his friends eagerly joined in to prepare the feast.
When the caterpillars arrived, they were pleasantly surprised.
They enjoyed the feast and were so impressed with the vegetables' hospitality that they promised not to trouble VeggieVille again.
In return, they agreed to help pollinate the flowers, contributing to a more lush and vibrant VeggieVille.
Charlie's idea had saved the day, but he humbly attributed the success to their teamwork and friendship.
They celebrated their victory with a grand party, filled with laughter, dance, and merry games.
That night, under the twinkling stars, they made a pact to always stand by each other, come what may.
From then on, the story of the happy carrot and his friends spread far and wide, a tale of friendship, unity, and positivity.
Charlie, Bella, Timmy, and Percy continued to live their joyful lives, their laughter echoing through VeggieVille.
And so, the tale of the happy carrot and his friends serves as a reminder that no matter the challenge, with optimism, teamwork, and a bit of creativity, anything is possible.

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

other-examples\src\main\resources\example-files\story-about-happy-carrot.txt

Once upon a time in the town of VeggieVille, there lived a cheerful carrot named Charlie.
Charlie was a radiant carrot, always beaming with joy and positivity.
His vibrant orange skin and lush green top were a sight to behold, but it was his infectious laughter and warm personality that really set him apart.
Charlie had a diverse group of friends, each a vegetable with their own unique characteristics.
There was Bella the blushing beetroot, always ready with a riddle or two; Timmy the timid tomato, a gentle soul with a heart of gold; and Percy the prankster potato, whose jokes always brought a smile to everyone's faces.
Despite their differences, they shared a close bond, their friendship as robust as their natural goodness.
Their lives were filled with delightful adventures, from playing hide-and-seek amidst the leafy lettuce to swimming in the dewy droplets that pooled on the cabbage leaves.
Their favorite place, though, was the sunlit corner of the vegetable patch, where they would bask in the warmth of the sun, share stories, and have hearty laughs.
One day, a bunch of pesky caterpillars invaded VeggieVille.
The vegetables were terrified, fearing they would be nibbled to nothingness.
But Charlie, with his usual sunny disposition, had an idea.
He proposed they host a grand feast for the caterpillars, with the juiciest leaves from the outskirts of the town.
Charlie's optimism was contagious, and his friends eagerly joined in to prepare the feast.
When the caterpillars arrived, they were pleasantly surprised.
They enjoyed the feast and were so impressed with the vegetables' hospitality that they promised not to trouble VeggieVille again.
In return, they agreed to help pollinate the flowers, contributing to a more lush and vibrant VeggieVille.
Charlie's idea had saved the day, but he humbly attributed the success to their teamwork and friendship.
They celebrated their victory with a grand party, filled with laughter, dance, and merry games.
That night, under the twinkling stars, they made a pact to always stand by each other, come what may.
From then on, the story of the happy carrot and his friends spread far and wide, a tale of friendship, unity, and positivity.
Charlie, Bella, Timmy, and Percy continued to live their joyful lives, their laughter echoing through VeggieVille.
And so, the tale of the happy carrot and his friends serves as a reminder that no matter the challenge, with optimism, teamwork, and a bit of creativity, anything is possible.

spring-boot-example\src\main\resources\miles-of-smiles-terms-of-use.txt

Miles of Smiles Car Rental Services Terms of Use

1. Introduction

These Terms of Service (“Terms”) govern the access or use by you, an individual, from within any country in the world, of applications, websites, content, products, and services (“Services”) made available by Miles of Smiles Car Rental Services, a company registered in the United States of America.

2. The Services

Miles of Smiles rents out vehicles to the end user. We reserve the right to temporarily or permanently discontinue the Services at any time and are not liable for any modification, suspension or discontinuation of the Services.

3. Bookings

3.1 Users may make a booking through our website or mobile application.

3.2 You must provide accurate, current and complete information during the reservation process. You are responsible for all charges incurred under your account.

3.3 All bookings are subject to vehicle availability.

4. Cancellation Policy

4.1 Reservations can be cancelled up to 7 days prior to the start of the booking period.

4.2 If the booking period is less than 3 days, cancellations are not permitted.

5. Use of Vehicle

5.1 All cars rented from Miles of Smiles must not be used:

for any illegal purpose or in connection with any criminal offense.

for teaching someone to drive.

in any race, rally or contest.

while under the influence of alcohol or drugs.

6. Liability

6.1 Users will be held liable for any damage, loss, or theft that occurs during the rental period.

6.2 We do not accept liability for any indirect or consequential loss, damage, or expense including but not limited to loss of profits.

7. Governing Law

These terms will be governed by and construed in accordance with the laws of the United States of America, and any disputes relating to these terms will be subject to the exclusive jurisdiction of the courts of United States.

8. Changes to These Terms

We may revise these terms of use at any time by amending this page. You are expected to check this page from time to time to take notice of any changes we made.

9. Acceptance of These Terms

By using the Services, you acknowledge that you have read and understand these Terms and agree to be bound by them.

If you do not agree to these Terms, please do not use or access our Services.

```

vespa-example\src\main\java\README.md

````
# Server side setup with Maven to run example on Vespa Cloud
1. Do steps 1 - 4 from https://cloud.vespa.ai/en/getting-started-java.html
2. Create new Maven Java application and go to it
3. Add following dependency to `pom.xml`, so the latest Vespa release is used
on each build:
```xml
<parent>
    <groupId>com.yahoo.vespa</groupId>
    <artifactId>cloud-tenant-base</artifactId>
    <version>[8,9)</version>
    <relativePath/>
</parent>
```
4. Create `src/main/application/schemas/langchain4j.sd` with following
content:
```sd
schema langchain4j {
  document langchain4j {
    field text_segment type string {
      indexing: summary | index
    }
    field vector type tensor<float>(x[384]) {
      indexing: summary | attribute
      attribute {
        distance-metric: prenormalized-angular
      }
    }
  }
  rank-profile cosine_similarity {
    inputs {
      query(q) tensor<float>(x[384])
    }
    function cosine() {
      expression: 1.0 - distance(field, vector)
    }
    first-phase {
      expression: if (cosine() < query(threshold), -1, cosine())
      rank-score-drop-limit: 0.0
    }
  }
}
```
5. Create `src/main/application/services.xml` with following content:
```xml
<?xml version="1.0" encoding="utf-8" ?>
<services version="1.0">
    <container version="1.0" id="default">
        <document-api/>
        <search/>
    </container>
    <content id="langchain4j" version="1.0">
        <redundancy>1</redundancy>
        <documents>
            <document type="langchain4j" mode="index"/>
        </documents>
    </content>
</services>
```
````

6. Do steps 6 from https://cloud.vespa.ai/en/getting-started-java.html. This will generate SSL private key and
   public certificate and store them locally. Their path will be used in client example. Certificate will be added
   to the project under `src/main/application/security/clients.pem`.
7. Now you can build (you need Java > 17 for this) and deploy your application: do steps 7 & 8 from
   https://cloud.vespa.ai/en/getting-started.html.
   Alternatively you can deploy your build application by using [Cloud UI](https://console.vespa-cloud.com) and
   uploading `target/application.zip` there.
